

Village of Bellport Marina Reconstruction

A general concept layout for the proposed marina and the results of the environmental review was presented to the Board of Trustees on the 28th of November, 2022. Following is the marina project and responses to community questions/concerns and the submitted NYS SEQR (Full Environmental Assessment Form Part 1-3):

Project Definition

Reconstruct and expand the existing deteriorated marina docks and wave protection within/at the Bellport Municipal Marina to provide continued safe harbor for emergency vessels, the village ferry, the village work boat and small commercial vessels while also providing continued access to water dependent recreational use (I.e., boating and fishing) to Village residents.

The project was and continues to be reviewed pursuant to 6 NYCRR Part 617 – State Environmental Quality Review. It was determined that proposed reconstruction and development is a Type II Action, requiring a Short Environmental Assessment (SEA). However, the Village elected to prepare a Full Environmental Assessment Form (FEAF) to identify, discuss, and mitigate (if required) potential impacts. These potential impacts include:

- | | |
|---|--|
| 1. Impacts on Geological Features. | 10. Impact on Open Space Recreation. |
| 2. Impacts on Surface Water. | 11. Impact on a Critical Environmental Area. |
| 3. Impacts on Groundwater. | 12. Impact on Transportation. |
| 4. Impacts on Flooding. | 13. Impact on Energy. |
| 5. Impacts on Air. | 14. Impact on Noise, Odor, and Light. |
| 6. Impacts on Plants and Animals. | 15. Impact on Human Health. |
| 7. Impacts on Agricultural Resources. | 16. Consistency with Community Plans. |
| 8. Impacts on Aesthetic Resources. | 17. Consistency with Community Character. |
| 9. Impacts on Historic & Archeological Resources. | |

Community concerns for continued consideration of the design include:

1. Infrastructure Condition. The existing waterfront development (i.e., piers, docks and bulkheading) is deteriorated with limited remaining service life. This opinion is supported by the bulkhead failures and eroded retained fill along the Main Dock and the Rock Dock, conditions that were remedied as part of the recent Village reconstruction efforts, along with continued annual maintenance at Osborne Park Bulkhead and the Ferry Dock. Identified deteriorated infrastructure includes (a) bulkheading along Ho-Hum Beach, (b) Osborn Park Bulkhead, (c) Marina Ramp and the adjoining bulkhead, and (d) timber piles supporting the Stick and Ferry Docks. The replacement of this infrastructure was identified and prioritized in 2020.

2. **Project Expense.** The project is being funded 75/25 through a federal grant. The project scope as currently defined was submitted for review and the grant agreement provided to the Village.
3. **Wave Protection.** The Village Board, Waterfront Commission and Community Public comments identified wave energy entering the marina as a primary concern, as it results in both damage to the docks and boats. The waves entering the marina are primarily wind generated over a fetch of nearly 3 miles and reflect off the hardened bulkheads east of the marina. The four alternatives that were considered to mitigate this impact:
 - (a) **Stone Breakwater.** An engineered stone mound placed in tidal waters as a barrier to the incoming waves extending from the bay bottom to 4 ft above the water surface during high tides.
 - (b) **Living Breakwater.** A partially submerged engineered rubble mound system intertwined with ecologically enhanced segments that remain submerged during low tide. The segments typically comprise boxes, ridges and streets intended to mimic the core structure of a natural reef and promote natural habitats.
 - (c) **Floating Wave Attenuator.** Floating elements that use a combination of mass, size (i.e., width) and anchoring systems to reduce the impact of incoming waves in the marina via reflection and/or natural dissipation.
 - (d) **Wave Screening.** Vertical, or slightly pitched, timber planks extending from above 18 inches above the bay bottom to 4 ft above the water surface during high tides that reflects incoming wave energy. The screen is stiffened by a system of timber framing, which is supported by both plumb and batter piles.

The Village Board, after consideration of the recommendation from by the Waterfront Commission, has elected to utilize a system of wave screening to reduce the wave transmission into the marina basin. A Stone Breakwater and Living Breakwater are not preferred as placing fill into the Littoral Zone and/or Nearshore Area is presumptively incompatible with the existing habitat and not consistent with the preservation, protection, or enhancement of the present and potential values of tidal wetlands if undertaken (6 CRR-NY 661.5). The design engineer (Rising Tide / GEI) along with a second independent consultant both recommended these options be avoided as they are generally not permissible by the NYS Department of Environmental Conservation without significant mitigation. Furthermore, the Waterfront Commission considered both the options as possible hazard to navigation. A Wave Attenuator is not preferred due to initial cost considerations. The Village Board requested that the Engineer (Rising Tide / GEI) continue to consider this alternate with as the design progresses.

4. **Marina Layout and Design.** The marina slip, fairway, and entrance design widths along with design vessel turning radius, are based on recommended published values presented in the Planning and Design Guidelines for Small Craft Harbors. This manual, which is prepared by a Task Committee of the American Society of Professional Engineers, presents guidelines intended to “produce facilities that are convenient, attractive and safe, as well as meeting aesthetic, social, and cultural goals.” Slip widths are a function of vessel size and type (i.e.,

power or sail) at berth and distributed based upon existing marina vessel metrics. Future vessel length was considered. Docking vessels under sail in lieu of power is not recommended and should be avoided.

The availability of safe recreational boating is an important consideration of the proposed project. The engineering technical standards recommend slips wider than the existing. As a result, the marina total dock length must be increased to maintain the existing number of available slips. Furthermore, the Village prefers to increase the number of slips by 10 to 15 percent to accommodate the existing demand. Safe access for recreational non-powered vessels afforded through Rowboat Beach to the bay is a consideration with the design.

The arrangement of the ferry terminal, along with relocating the terminal to an alternate position along Osborne Park, was considered.

A Living Shoreline along Osborne Park in lieu of bulkheading was considered for cost reduction.

5. **Water Quality.** The impact of the proposed action and alternates will be assessed throughout the design process. The proposed design remains in the conceptual phase (i.e., 10-percent complete). Water quality will be considered during subsequent design phases and will include dredge considerations. As part of this current phase, the Village considered the wave screen vs. alternatives. The wave screen is baffled and terminates above the bay bottom, details that are intended to reduce flow restrictions. Other alternates considered present greater flow restrictions.
6. **Dredging.** Dredging of the marina basin is included with the project scope; however, is dependent upon locating an agreeable inland location for the spoils with the Village. Dredging of the Ho Hum Channel and Ho Hum Basin is excluded due to permitting and cost considerations.
7. **Present vs. Future Costs.** Maintenance costs of the proposed development is a consideration of the design. These costs have been projected through the anticipated design life (30-, 40-, or 50-year) as presented by the engineer. Furthermore, anticipated repairs due to storm and ice are also being considered with the selection.
8. **Schedule.** The current projected schedule comprises development in the Spring of 2025. This schedule is developed with assumed timelines to secure the final grant agreement and regulatory permits along with preparing final designs and soliciting a qualified marine contractor. Constituent preference to expedite this timeline is generally not available due to necessary funding application and regulatory reviews.

Full Environmental Assessment Form
Part 2 - Identification of Potential Project Impacts

Agency Use Only [If applicable]	
Project :	Marina Project 2022
Date :	11/28/2022

Part 2 is to be completed by the lead agency. Part 2 is designed to help the lead agency inventory all potential resources that could be affected by a proposed project or action. We recognize that the lead agency's reviewer(s) will not necessarily be environmental professionals. So, the questions are designed to walk a reviewer through the assessment process by providing a series of questions that can be answered using the information found in Part 1. To further assist the lead agency in completing Part 2, the form identifies the most relevant questions in Part 1 that will provide the information needed to answer the Part 2 question. When Part 2 is completed, the lead agency will have identified the relevant environmental areas that may be impacted by the proposed activity.

If the lead agency is a state agency **and** the action is in any Coastal Area, complete the Coastal Assessment Form before proceeding with this assessment.

Tips for completing Part 2:

- Review all of the information provided in Part 1.
- Review any application, maps, supporting materials and the Full EAF Workbook.
- Answer each of the 18 questions in Part 2.
- If you answer “Yes” to a numbered question, please complete all the questions that follow in that section.
- If you answer “No” to a numbered question, move on to the next numbered question.
- Check appropriate column to indicate the anticipated size of the impact.
- Proposed projects that would exceed a numeric threshold contained in a question should result in the reviewing agency checking the box “Moderate to large impact may occur.”
- The reviewer is not expected to be an expert in environmental analysis.
- If you are not sure or undecided about the size of an impact, it may help to review the sub-questions for the general question and consult the workbook.
- When answering a question consider all components of the proposed activity, that is, the “whole action”.
- Consider the possibility for long-term and cumulative impacts as well as direct impacts.
- Answer the question in a reasonable manner considering the scale and context of the project.

Full Environmental Assessment Form
Part 3 - Evaluation of the Magnitude and Importance of Project Impacts
and
Determination of Significance

Part 3 provides the reasons in support of the determination of significance. The lead agency must complete Part 3 for every question in Part 2 where the impact has been identified as potentially moderate to large or where there is a need to explain why a particular element of the proposed action will not, or may, result in a significant adverse environmental impact.

Based on the analysis in Part 3, the lead agency must decide whether to require an environmental impact statement to further assess the proposed action or whether available information is sufficient for the lead agency to conclude that the proposed action will not have a significant adverse environmental impact. By completing the certification on the next page, the lead agency can complete its determination of significance.

Reasons Supporting This Determination:

To complete this section:

- Identify the impact based on the Part 2 responses and describe its magnitude. Magnitude considers factors such as severity, size or extent of an impact.
- Assess the importance of the impact. Importance relates to the geographic scope, duration, probability of the impact occurring, number of people affected by the impact and any additional environmental consequences if the impact were to occur.
- The assessment should take into consideration any design element or project changes.
- Repeat this process for each Part 2 question where the impact has been identified as potentially moderate to large or where there is a need to explain why a particular element of the proposed action will not, or may, result in a significant adverse environmental impact.
- Provide the reason(s) why the impact may, or will not, result in a significant adverse environmental impact
- For Conditional Negative Declarations identify the specific condition(s) imposed that will modify the proposed action so that no significant adverse environmental impacts will result.
- Attach additional sheets, as needed.

A Full Environmental Assessment Form Part 2 review of the Marina Project 2022 results in a yes response to only one action -- 3. Impacts on Surface Water (c) the proposed action may involve dredging more than 100 cubic yards of material from a wetland or water body. This project will involve a reconfiguration of the docks in the marina and the possible addition of a new dock and breakwater. Dredging will be necessary as it is part of the construction process. The dredging will be within the area of the marina and it is not anticipated that this will significantly impact Bellport Bay beyond the Village of Bellport Marina.

Various permits from different review agencies for the project will be obtained and adhered to. Part of the approved permits will be the proper disposal of the dredge spoil.

Based on the completion of the Full Environmental Assessment Form Part evaluation, the Village of Bellport determines that this project will result in no significant impact to the environment as the majority of actions are determined to have little to no environmental impact.

Determination of Significance - Type 1 and Unlisted Actions

SEQR Status: ☒ Type 1 ☐ Unlisted

Identify portions of EAF completed for this Project: ☒ Part 1 ☒ Part 2 ☒ Part 3

Upon review of the information recorded on this EAF, as noted, plus this additional support information
2018 List of New York State Impaired Waters, FEMA Flood Map 36103D0718H and the New York State List of CEHA communities as well as NYSDEC
and US Army Corp regulations of wetland permit requirements.

and considering both the magnitude and importance of each identified potential impact, it is the conclusion of the
Village of Bellport as lead agency that:

☒ A. This project will result in no significant adverse impacts on the environment, and, therefore, an environmental impact statement need not be prepared. Accordingly, this negative declaration is issued.

☐ B. Although this project could have a significant adverse impact on the environment, that impact will be avoided or substantially mitigated because of the following conditions which will be required by the lead agency:

There will, therefore, be no significant adverse impacts from the project as conditioned, and, therefore, this conditioned negative declaration is issued. A conditioned negative declaration may be used only for UNLISTED actions (see 6 NYCRR 617.7(d)).

☐ C. This Project may result in one or more significant adverse impacts on the environment, and an environmental impact statement must be prepared to further assess the impact(s) and possible mitigation and to explore alternatives to avoid or reduce those impacts. Accordingly, this positive declaration is issued.
